SUBJECT: Groundwater Sampling Results at MW-A  
Fansteel/Wellman Dynamics - Creston, Iowa  
IAD No. 065218737

Dear Mr. Bahnke:

Enclosed are the analytical results and chain-of-custody of the groundwater sampling event conducted at MW-A on March 10, 1995. These results are being submitted on behalf of Fansteel/Wellman Dynamics in accordance with their quarterly groundwater monitoring program. As with the previous two sampling events, conducted on August 29, 1994 and November 16, 1994, two groundwater samples were collected approximately two hours apart and analyzed by National Environmental Testing, Inc. Following is a summary of the groundwater sampling results at MW-A.

<u>Sampling Date</u>	<u>Total Chromium (mg/l)</u>
*12/15/93	0.23
7/28/94	4.7
8/29/94	1.7 and 0.079
11/16/94	0.431 and 0.086
3/10/95	0.354 and 0.035

\* MW-A was constructed on this date.

As evident from these results, the chromium concentration in the groundwater, at the time the well was constructed, was relatively low. Only in the July sample does the concentration become elevated. Major disturbance caused by the excavation and removal of approximately 150 cubic yards of contaminated soil and the accumulation of rainfall following the excavation and prior to backfilling likely contributed to this single elevated level. Since that time, however, the analytical results have shown a continuous decrease in chromium concentration. To illustrate this, a bar graph has been enclosed. The results also strongly indicate that the true groundwater contamination is limited to less than 0.1 mg/l and that the higher chromium values are due to sediments and not dissolved chromium. Further monitoring is expected to confirm these indications.

As for soil contamination in the area, Fansteel/Wellman Dynamics is continuing to proceed with the additional exploratory work scheduled for later this spring. Specifically, they are currently in the process of scheduling and coordinating the drilling of six (6) additional soil borings to determine the horizontal and vertical extent of contamination in the area. Also, three (3) of these borings will be converted into monitoring wells and will be added to the quarterly groundwater monitoring program. Fansteel/Wellman will advise U.S. EPA once the drilling is scheduled.

Very truly yours,

**HOWARD R. GREEN COMPANY**
